- 1 - Support frame : The loading support frame consists of two steel plates, which is extremely sturdy.
- 2 - Shell : It is made of light aluminum alloy shell, light but hard. The cooling fin is specially designed to ensure quick heat dissipation with the rate up to 40% and continuous working. The integral enclosed structure is applicable for chemical plant, electroplate factory, etc.
- 3 - Side magnetic braking device : The magnetic force generator is the latest design which allows instant brake when electric power is cut off. Thus the braking safety while loading is guaranteed.
- 4 - Reverse phase sequence protection device : It is the special electrical part which cut the control circuit in case of wiring error in the power supply.
- 5 - Transformer : The 24VAC transformer is used to prevent unexpected accidents caused by electric leakage.
- 6 - Load chain : The chain is a Japan special heat-treated alloy steel chain (FEC80). It can be safely used in poor environments such as rain, sea water and chemicals.
- 7 - Hook : It is hot forging with perfect strength that is hard to break. The operation safety of the lower hook is ensured by its 360 degrees rotation and safety latch.
- 8 - Push button switch : Waterproof push button switch is applied and come with emergency switch. It is light and durable.

Electric Chain Hoist

BM Series

Electric Chain Hoist with Hook - Model BM-S

Main Features

- Light aluminium alloy shell, light-weight but hard, is adopted to be easy for heat dissipation
- Reverse phase sequence protection device will cut the control circuit in case of wiring error in the power supply.
- Limit switch is installed to protect overtravelling while lifting or lowering.
- 24VAC control system is used to prevent electric leakage.
- The side magnetic brake device provides immediate braking when power fails, thus ensuring safe braking during loading.
- The chain shall adopt the Japan FEC80 ultra heat-treated alloy steel chain.
